

Denton T. Hershberger receives IGSHPA Certification

Harness the Earth's Energy with a Ground Source Heat Pump

STILLWATER, OKLA. - Ground Source Heat Pump (GSHP) systems use modern technologies to harness the stored energy of the greatest solar collector in existence: the earth. Denton T. Hershberger of Berlin Heating & Cooling, LLC in Berlin, OH is now accredited by the International Ground Source Heat Pump Association (IGSHPA) to **HARNESS THE EARTH'S ENERGY FOR YOU**. Hard work and extensive preparation has allowed Hershberger to give this community the opportunity to experience GSHP technology.

An IGSHPA-accredited installer is a benefit to the community because of his or her ability to offer the only qualified renewable energy system available today. These systems are perfect for homes, apartment complexes, businesses, schools, and more. In addition to heating and cooling, GSHPs also create free hot water in the summer and deliver substantial hot water savings in the winter.

Installation contractors like Hershberger learn about the design and installation of ground heat exchangers, which are the basis of GSHP systems. During the winter, water or an anti-freeze solution is circulated through buried pipe, collecting heat from the earth and transporting it into the building. During the summer, the system cools the building by reversing itself; collecting heat from the building and transporting it back into the earth.

Denton has 23 years of experience in geothermal loop design, installation, and Ground Source Heat Pumps. He resides in Sugarcreek with his wife Shelly and their three children.

For more information about this durable, low-maintenance, economic, and environment-friendly alternative to conventional heating and A/C, and how to receive a 30% Federal Tax Credit, contact Denton Hershberger at Berlin Heating & Cooling 330-403-4082 or visit the website at www.berlinheating.com.
